Experiment 7: Develop a Dashboard Prototype in Figma Displaying Performance Criteria for a Cellular System

Aim: To design a dashboard prototype in Figma displaying key performance criteria of a cellular system.

Procedure:

1. Open Figma and create a new design file.
2. Create a desktop frame with a light-gray background.
3. Add a heading titled “Cellular Network Performance Dashboard.”
4. Create rectangular cards to display key performance metrics such as Signal Strength, Network Coverage, Call Drop Rate, Data Throughput, and Latency.
5. Assign different colors to the metric cards for better visualization.
6. Add charts and graphs to represent network performance, signal quality, and data usage.
7. Include labels, icons, and sample values in each card to make the dashboard clear and user-friendly.
8. Arrange all elements neatly using proper alignment, spacing, and typography.
9. Add navigation options such as Overview, Network Status, Performance, and Reports.
10. Preview the prototype in Figma to check the layout and user interaction.

Output:

Result:

The cellular system performance dashboard prototype was successfully designed in Figma, displaying key performance metrics such as signal strength, network coverage, call drop rate, data throughput, and latency using cards, charts, and graphs.
